

EcoLoop Building Optimization Report

Generated by the EcoLoop AI Building Management System.

Current Building Metrics

Metric	Value
Timestamp	2026-07-26 12:39
Energy (kWh)	59736.16
Demand (kW)	0.21
Indoor Temp	21.0 °C
Outdoor Temp	10.9 °C
Humidity	58.6%
Occupancy	21

AI Optimization Decision

Setting	Value
Cooling Setpoint	22.0 °C
Heating Setpoint	20.0 °C
Lighting	60%
Fan Speed	40%

Reason

Optimized settings based on current PMV, occupancy, outdoor temperature and energy consumption analysis. Given the relatively low occupancy (21 people) and cool outside temperature (10.9°C), reducing cooling is sensible without compromising comfort. A fan speed of 40% maintains a moderate air quality while optimizing energy efficiency. The lighting level has been reduced to 60 to further decrease energy consumption.

Optimization Summary

Statistic	Value
Cycles	237
Avg Energy	35471.04
Min Energy	0.0
Max Energy	1009614.09
Avg Confidence	91.3
Avg Savings Pct	9.3
Total Savings Pct	-568815.8
